GOUR FARM - (COMPLETE DETAILS)

1. Introduction

Gour Farm is a **smart dairy investment business model** that allows people to invest money in **real dairy cows** using a mobile application. The farm takes full responsibility for buying, managing, feeding, and maintaining the cows, while investors earn **monthly passive income** from milk production.

This project combines:

Traditional dairy farming
Modern mobile technology
Transparent profit-sharing investment

---

2. Core Business Idea

The core concept is **one investor is linked to one real cow**.

Investors invest money based on the **current market price of a cow**.

Gour Farm buys the cow using that money.

The cow is physically present on the farm.

The investor can track all cow-related data through the app.

This ensures the investment is **real, physical, and transparent**, not virtual or speculative.

---

3. Investment Model

There is **no fixed minimum investment**.

If a cow costs ₹30,000 → investor can invest ₹30,000

If a cow costs ₹50,000 → investor can invest ₹50,000

Lower-cost cows generally produce less milk, while higher-cost cows produce more milk. This gives flexibility to investors with different budgets.

---

4. Milk Income & Profit Sharing

Milk produced by the cow is sold daily.

Step 1: Expense Coverage

First, milk income is used to cover:

Cow feed

Veterinary care

Labor

Water, electricity, and farm maintenance

Eg:10L/per day

5L money for expences

5L money only be consider as profit.

Step 2: Profit Sharing

After expenses, the remaining income is treated as **profit** and shared as:

25% to the Investor

75% to Gour Farm

Profit is calculated and credited **monthly**.

---

5. Lock-In Period

Every investment has a **mandatory lock-in of 3 years**.
Investors cannot cancel or withdraw before 3 years.
This provides stability and long-term planning for the farm.

---

6. Exit & Refund Policy (Main Cow)

Refunds depend on how long the investment lasted:

0–1 year → **100% refund**

1–2 years → **90% refund**

2–3 years → **80% refund**

3–5 years → **75% refund**

After 5 years → **50% refund (automatic closure)**

After 5 years, the investment ends automatically.

7. Cow Death Protection

If the invested cow dies:

Refund is processed based on the same refund table above.
Gour Farm may insure cows to reduce risk.
All cases are verified before processing refunds.

---

8. Calf Ownership Rule

If an invested cow gives birth:

First calf belongs to the investor

All future calves belong to Gour Farm

This gives investors an **extra asset** while allowing the farm to expand.

---

9. Calf (Baby Cow) Investment Rules

When the investor owns the first calf:

The calf follows the **same profit-sharing rule (25% / 75%)**
Calf investment validity is **5 years**
After 5 years → investor receives **75% of calf value**
Ownership then transfers to Gour Farm

---

10. Calf Sale Rule

If the investor sells the calf:

75% of sale amount → Investor
25% → Gour Farm

---

11. Calf Death Rule

If the calf dies within 5 years:

❌ No refund is provided
The calf is considered a **bonus benefit**, not the main investment

---

12. Mobile App Transparency

The Gour Farm app shows:

Cow photo and ID

Milk production data (daily & monthly)

Profit calculations

Health and vaccination records

Investment timeline

Exit eligibility status

This ensures **full transparency and trust**.

---

13. Benefits for Investors

Real asset-backed investment
Monthly passive income
Low entry cost
Transparent tracking
Safety refund rules
Bonus calf ownership

---

14. Benefits for Gour Farm

No dependency on bank loans
Stable long-term capital
Controlled financial risk
Faster farm expansion
Scalable business model

---

15. Business Scalability

Start with few cows
Expand to hundreds of cows
Add dairy products (curd, butter, ghee)
Expand regionally and nationally using the app

---

16. Final Conclusion

Gour Farm is not just a dairy farm.
It is a **technology-driven, asset-backed investment ecosystem** that benefits both investors and farm owners. By combining real cows, transparent profit sharing, and a digital platform, Gour Farm creates a sustainable and scalable dairy business.
